All Engine Room Staff must be suitably dressed and must wear coveralls, safety shoes, gloves, goggles and helmets as per the VMS PPE matrix. Engine Room and machinery spaces must be kept clean, tidy and as free as possible from oil/fuel stains or sources, all of which must be identified and eliminated. To prevent fires, any possible source of uncontrollable heat must be protected and any fuel leakage must be cleaned up and the source identified and eliminated.

participated. The workshop was organized and implemented by the Fishing Technology Service of the FAO Fisheries and Aquaculture Department, in close collaboration with the FAO Subregional Office for Southern Africa. During the workshop, the results of the Study on safety at sea in artisanal and smallscale fisheries in the South West Indian Ocean, conducted in May 2006, were presented. In addition, seven experts from SWIOFC member States made presentations and took up matters affecting safety at sea in their countries. Experts from Grenada, Sweden and FAO made presentations on global and regional aspects of safety at sea that enriched the information provided to the delegates. The information presented was debated

## Access Free Safety In Engine Workshop

ideal introduction to workshop processes, practices and materials for entry-level engineers and workshop technicians. With detailed illustrations throughout and simple, clear language, this is a practical introduction to what can be a very complex subject. It has been significantly updated and revised to include new material on adhesives, protective coatings, plastics and current Health and Safety legislation. It covers all the standard topics, including safe practices, measuring equipment, hand and machine tools, materials and joining methods, making it an indispensable handbook for use both in class and the workshop. Its broad coverage makes it a useful reference book for many different courses worldwide.

The reduction of the fire hazard of fuel is critical to improving survivability in impact-survivable aircraft accidents. Despite current fire prevention and mitigation approaches, fuel flammability can overwhelm post-crash fire scenarios. The Workshop on Aviation Fuels with Improved Fire Safety was held November 19-20, 1996 to review the current state of development, technological needs, and promising technology for the future development of aviation fuels
